# TUNABLE WHITE

The well-being is extremely important for all of us and for our relationships with others and it has influence on our behavior during the day. With Tunable White technology it is possible to adjust the colour temperature of the artificial light in order to maximize the comfort of the users inside indoor spaces. Natural light helps us to set our circadian rhythm which affects our wellbeing during

the day. Our luminaires with Tunable White technology are the perfect solution to light a wide range of environments such as offices, open spaces, lobbies and waiting rooms, conference rooms and healthcare spaces. This technology creates a dynamic white light, changing light colour temperature from 2700K up to 6500K while maintaining the light intensity constant.
